

PetCare Connect – Veterinary & Pet Owner Relationship Management CRM

Problem Statement

Veterinary clinics often face challenges in managing daily operations such as pet appointment scheduling, vaccination tracking, and client communication. Currently, most clinics rely on manual record-keeping, leading to missed reminders, poor follow-up, and limited customer engagement.

To address these inefficiencies, PetCare Connect aims to implement a Salesforce CRM that will:

- Automate appointment bookings and vaccination reminders
- Manage pet health records and owner profiles
- Enable seamless communication between clinics and pet owners
- Provide performance dashboards for management insights

Phase 1 (Problem Understanding & Industry Analysis):

1. Problem Understanding

Veterinary clinics often struggle with managing appointments, pet health records, and follow-ups efficiently. Manual systems or disconnected tools lead to delays, missed vaccinations, and poor client engagement. There is a need for a centralized CRM system that enhances communication between veterinarians, receptionists, and pet owners while ensuring timely care and improved operational visibility.

Key operational areas:

- Pet and owner registration & history management

- Appointment scheduling and conflict prevention
- Vaccination tracking and reminders
- Treatment documentation and prescription management
- Follow-up scheduling and feedback collection
- Reporting and performance tracking

2. Industry Pain Points

Pain Point	Description	Impact
Missed Vaccination or Follow-ups	No automated reminders or tracking for upcoming treatments	Decline in pet health and client satisfaction
Overlapping Appointments	Manual scheduling causes double bookings	Inefficient time management, unhappy clients
Disorganized Medical Records	Scattered or paper-based documentation	Slow service, errors in treatment history
Limited Communication	Pet owners not notified promptly about appointments or vaccinations	Missed visits, reduced engagement
Lack of Insights	No centralized view of performance and revenue	Poor business decision-making

3. Stakeholder Identification

Stakeholder	Role	Needs / Pain Points
Admin / Clinic Manager	Oversees clinic operations and reports	Needs visibility into appointments, revenue, and staff performance

Stakeholder	Role	Needs / Pain Points
Veterinarian	Conducts consultations, diagnoses, and prescribes treatment	Requires access to complete pet medical history and upcoming schedules
Receptionist	Manages appointments, client communication, and records	Needs simplified scheduling and automated reminders
Pet Owner	Books appointments, receives treatment and follow-ups	Wants an easy booking process and timely reminders for vaccinations and visits

4. Salesforce as the Solution

Business Area	Salesforce Feature / Capability
Pet & Owner Management	Custom objects for Pets and Owners with relationship mapping
Appointment Scheduling	Appointment object with conflict prevention using Salesforce Flow
Vaccination Tracking & Reminders	Automated reminder Flows + Email/SMS notifications
Medical Records & Prescriptions	Linked treatment history records for each pet
Follow-up Automation	Salesforce Flow or Process Builder for post-visit follow-ups
Communication & Engagement	Integration with WhatsApp/Marketing Cloud for updates
Reporting & Dashboards	Real-time dashboards for appointments, revenue, and vaccination compliance

Business Area

Salesforce Feature / Capability

5. Outcome

- **Problem statement defined** → Inefficiencies in manual pet care management and communication gaps between clinics and owners.
- **Pain points listed** → Missed follow-ups, double bookings, disorganized records, limited communication.
- **Stakeholders mapped** → Admin, Veterinarian, Receptionist, Pet Owner.
- **Salesforce solution framework created** → Centralized CRM with automation for scheduling, reminders, records, and reporting.
- **Success metrics established** → Reduction in missed appointments, improved pet health tracking, enhanced customer satisfaction, and better clinic insights.

Phase 2 (Org Setup & Configuration):

In this phase, the Salesforce Developer Org was configured to align with the requirements of the Student Admission Management System. Key configuration activities included:

- **Salesforce Edition Selection** A Salesforce Developer Edition was used to build and test the project, as it provides core CRM features, customization, and LWC development capabilities at no cost.
- **Company Profile Setup** The company profile was configured with institution details such as College/University name, locale, time zone, currency, and default language, ensuring consistency across records.

 **SETUP**

Save & New

Save

Before-Save Flow (Record-Triggered)

Prevent Duplicate Appointments

Purpose : To ensure that a **veterinarian cannot be double-booked** for multiple appointments at the same date and time.

This flow automatically checks for existing appointments before saving a new or updated record, ensuring schedule integrity and preventing overlaps.

After-Save Flow (Record-Triggered)

Appointment Confirmation & Notifications

Purpose : Automatically send an **appointment confirmation email** to the **pet owner** immediately after an appointment is created.

This ensures instant communication, reduces manual follow-ups, and enhances the clinic's customer experience.

Appointment Confirmation and Notifications

Purpose : To automatically send an **email confirmation** to the **Pet Owner** immediately after a new appointment is created.

This automation improves communication, eliminates manual follow-up tasks, and enhances the client experience for the veterinary clinic.

1 Day Before Appointment”

Purpose : Send an automated reminder **one day before** the scheduled appointment to the pet owner (email) to reduce no-shows and improve customer experience.

Approval Process for High-Cost Treatments

Purpose : To ensure that **expensive medical treatments** (estimated cost greater than ₹10,000) are **reviewed and approved by an Admin** before being performed or billed. This maintains financial control, prevents unauthorized procedures, and supports clinic accountability.

 **SETUP**

Phase 5 (Apex Programming)- Developer

Classes & Objects:

Classes are blueprints for logic, containing methods and variables

Delete Old Medical Records (Batch Apex)

Purpose : To automatically clean up the database by deleting **old medical records** that are more than **6 months old**.

This helps in maintaining optimal org performance, reducing storage costs, and keeping data relevant and manageable.

```
DeleteOldMedicalRecordsBatch.cls X
force-app > main > default > classes > DeleteOldMedicalRecordsBatch.cls > ...
1  global class DeleteOldMedicalRecordsBatch implements Database.Batchable<SObject> {
2      global Database.QueryLocator start(Database.BatchableContext bc) {
3          return Database.getQueryLocator([
4              SELECT Id FROM Medical_Record__c
5              WHERE CreatedDate < :System.today().addMonths(-6)
6          ]);
7      }
8      global void execute(Database.BatchableContext bc, List<Medical_Record__c> records) {
9          delete records;
10     }
11     global void finish(Database.BatchableContext bc) {}
12 }
13
```

Daily Appointment Summary Report

Purpose : Automatically send a **daily email summary** to the clinic administrator containing the **total number of appointments scheduled for the current day**.

This keeps the admin informed about clinic activity without requiring manual reports.

```
DeleteOldMedicalRecordsBatch.cls X DailyAppointmentSummary.cls X
C:\Users\meiya\Downloads\Salesforce\Capstone\force-app\main\default\classes\DeleteOldMedicalRecordsBatch.cls
1  global void execute(SchedulableContext sc) {
2      Integer count = [SELECT COUNT() FROM Appointment__c WHERE Appointment_DateTime__c = :Date.today()];
3      Messaging.SingleEmailMessage mail = new Messaging.SingleEmailMessage();
4      mail.setToAddresses(new String[]{ 'meiyazhagan2k4@gmail.com' });
5      mail.setSubject('Daily Appointment Summary');
6      mail.setPlainTextBody('Today's total appointments: ' + count);
7      Messaging.sendEmail(new Messaging.SingleEmailMessage[]{ mail });
8  }
9
10 }
11
```

Phase 6 (User Interface Development):

Lightning App Builder

- Built a custom Pet Care App with navigation for Pet, Pet Owner, Appointment, and Medical Records, Veterinarian etc.
- Added Record Pages, Home Pages, Tabs, and Utility Bar using Lightning App Builder

PetCare Connect Overview Dashboard provides a comprehensive, real-time view of the clinic's operations and performance across veterinarians, pet owners, pets, appointments, treatments, and financials. Designed for veterinary clinics, this dashboard helps administrators and vets track daily appointments, monitor treatment outcomes, evaluate veterinarian productivity, and analyze financial trends.

To empower veterinary clinic staff and management with a single, visually engaging dashboard that unifies patient care, appointment management, and business analytics for smarter decision-making.

Phase 7 (Integration & External Access)

This phase focuses on enabling secure and seamless integrations between Salesforce and external systems such as pet health APIs, payment gateways, reminder services, and communication platforms. These integrations enhance collaboration between veterinarians, pet owners, and external service providers.

Named Credentials

Named Credentials provide a secure and simplified way to authenticate and connect with external APIs without embedding credentials in Apex code. They bundle the endpoint URL and authentication mechanism together for easier maintenance.

- Usage: Used for integrating with third-party services like online payment gateways (for booking fees or vaccinations) or external pet health record systems.
 - Key Benefit: Centralized management of authentication and endpoints, reducing hardcoding and improving security.
-

External Services

External Services allow Salesforce to connect with REST APIs described by OpenAPI/Swagger definitions, automatically generating invocable actions usable in Flow or Apex.

- Usage: Integrated with veterinary medical databases or microchip registration APIs to fetch or verify pet medical information.
 - Key Benefit: Enables both admins and developers to use external APIs directly in Flows, simplifying automation for medical updates or vaccination verification.
-

Web Services (REST/SOAP)

Salesforce supports both REST and SOAP web services for integration with modern and legacy systems.

- Usage: REST APIs can send appointment or vaccination details to external analytics dashboards; SOAP can be used to synchronize with older clinic ERP or billing systems.
 - Key Benefit: Ensures compatibility with both modern cloud APIs and traditional on-premise systems.
-

Callouts

Apex callouts let Salesforce send HTTP requests and handle external responses for real-time or batch data exchange.

- Usage: Used to confirm online payments for pet appointments, check vaccine stock availability, or fetch updated pricing for treatments.
 - Key Benefit: Keeps Salesforce data in sync with external services, ensuring accurate, up-to-date information during clinical workflows.
-

Platform Events

Platform Events provide event-driven communication within Salesforce and with external apps.

- Usage: When a vaccination record is updated or an appointment status changes, a Platform Event can notify external systems like SMS gateways or mobile apps for instant updates.
 - Key Benefit: Enables real-time notifications between Salesforce and external systems, enhancing responsiveness and customer experience.
-

Change Data Capture (CDC)

Change Data Capture publishes record changes (create, update, delete, undelete) as real-time events that external systems can subscribe to.

- Usage: When a pet's medical record or owner's contact info is updated, external systems like health databases or mobile portals can be updated automatically.
 - Key Benefit: Keeps data synchronized across platforms without manual data entry or periodic imports.
-

Salesforce Connect

Salesforce Connect allows Salesforce to access external data sources in real-time without physically storing them in Salesforce.

- Usage: Used to view or link with external veterinary laboratory results, pet insurance data, or external treatment history databases.
 - Key Benefit: Reduces data redundancy, lowers storage usage, and ensures users always see the most current data from external sources.
-

API Limits

Salesforce enforces API request limits to ensure stable system performance.

- Usage: PetCare Connect must monitor API usage when making frequent callouts to external systems for reminders, lab results, or payment verification.
 - Key Benefit: Helps manage integrations efficiently while staying compliant with Salesforce governor limits.
-

OAuth & Authentication

OAuth 2.0 provides a secure, token-based authentication method for connecting Salesforce with third-party apps.

- Usage: Used when connecting Salesforce to the Pet Owner Portal, Vet Mobile App, or Pet Insurance Provider APIs.
 - Key Benefit: Ensures secure, industry-standard authentication without exposing sensitive credentials.
-

Remote Site Settings

Remote Site Settings whitelist trusted external endpoints that Salesforce can communicate with.

Although superseded by Named Credentials, they remain useful for simpler integrations.

- Usage: Used for older services such as SMS notifications or microchip verification APIs that don't require OAuth.
- Key Benefit: Ensures Salesforce communicates only with approved and secure endpoints.

Phase 8 (Data Management & Deployment Tools)

This phase focuses on importing, managing, and deploying data and metadata efficiently within Salesforce. It ensures that pet, owner, appointment, and medical record data are migrated, maintained, and backed up accurately while enabling a smooth developer workflow for enhancements and deployments.

Data Import Wizard

- Browser-based tool that can import up to 50,000 records directly through the Salesforce UI.
 - Supports both standard and custom objects such as *Pet__c*, *Pet_Owner__c*, *Appointment__c*, and *Medical_Record__c* with automatic field mapping and duplicate prevention.
 - Usage: Used by the Clinic Administrator or Receptionist to upload new pet and owner records received offline, or to bulk import vaccination and appointment schedules.
 - Key Benefit: Quick, no-code import method for small to medium datasets with built-in data validation and duplicate checks.
-

Data Loader

- Desktop client for handling large volumes of records (hundreds of thousands or more).
 - Supports Insert, Update, Upsert, Delete, Export operations with CSV files.
 - Usage: Used during system migration to bring in historical pet data, medical history, vaccination records, and archived appointments. Also useful for exporting appointment summaries for reporting or audits.
 - Key Benefit: Provides high-volume data handling for migration, bulk updates, and automated backups.
-

Duplicate Rules

- Work in combination with Matching Rules to prevent or control duplicate record creation.
- Can be configured to block duplicates or allow with alerts depending on the workflow.

- Usage: Ensures no duplicate *Pet Owner*, *Pet*, or *Veterinarian* records are created when importing or adding data.
For example, prevents multiple owner accounts with the same email or pet registration number.
 - Key Benefit: Maintains clean, accurate, and trustworthy CRM data.
-

Data Export & Backup

- Enables manual or scheduled data exports for secure backups.
 - Exports data as CSV files bundled in a .zip archive, which can be downloaded or stored externally.
 - Usage: Used for weekly or monthly backups of appointments, vaccination records, and medical data to comply with clinic data retention policies.
 - Key Benefit: Protects critical business data from accidental loss and ensures compliance with veterinary data storage regulations.
-

VS Code & SFDX (Salesforce DX)

- VS Code (Visual Studio Code) is the recommended development environment for Salesforce projects.
- Salesforce DX (SFDX) provides a modern developer experience with source tracking, version control integration, and scratch orgs for isolated testing.
- Usage: Used by developers to build and deploy Lightning Web Components (LWCs) such as:
 - PetProfileViewer (view pet and owner details)
 - AppointmentScheduler (book and modify appointments)
 - MedicalRecordManager (add/update treatment records)
- Key Benefit: Streamlines development and deployment workflows with Git integration, version control, and automated testing capabilities.

Phase 9 (Reporting, Dashboards & Security Review)

Session Settings:

In the Pet Care project, session settings can enforce logout after inactivity to prevent unauthorized access to Medical Record.

SETUP

Session Settings

Session Settings

Set the session security and session expiration timeout for your organization.

Session Timeout

Timeout Value

2 hours

☐ Disable session timeout warning popup

☒ Force logout on session timeout

Session Settings

☐ Lock sessions to the IP address from which they originated

☒ Lock sessions to the domain in which they were first used

☐ Terminate all of a user's sessions when an admin resets that user's password

☒ Force relogin after Login-As-User

☐ Require HttpOnly attribute

☐ Use POST requests for cross-domain sessions

☐ Enforce login IP ranges on every request

☐ When embedding a Lightning application in a third-party site, use a session token instead of a session cookie.

Audit Trail :

- Tracks all Admin changes (like modifications to fields, validation rules, or user permissions) it ensures transparency by recording changes.

SETUP

View Setup Audit Trail

View Setup Audit Trail

The last 20 entries for your organization are listed below. You can [download](#) your organization's setup audit trail for the last six months (Excel .csv file).

Date	User	Source Namespace Prefix	Action	Section	Delegate User
11/8/2025, 3:45:49 PM GMT+5:30	meiyazhagan2k4339@agentforce.com		Organization setup action: sRHRRelatedListViewEnabledOFFOn has changed.
